FROM: P. H. BURDETT

SUBJECT: 16 GAUGE SKEET LOAD

Because of low volume involved, the 16 Gauge Skeet load has never been converted to a "Power Piston" wad column and is presently loaded with an "H" wad.

Now that "H" wads are being dropped in 12 and 20 Gauge loads and since suitable 16 Gauge "Power Piston" wads are now available, it is proposed that all future loadings of 16 Gauge Skeet loads be "Power Piston."

No change in volume is anticipated.
