## RIM FIRE RIFLES - contd.

## RIM FIRE TARGET RIFLE - contd.

The prototype as shown had the following features:

- 1. Straight line lockup in the Receiver lugs.
- 2. Reduced "lock" time as compared with competitive rifles in the lower price range.
- 3. Stock continental design.
- 4. Butt Plate firm rubber and adjustable.
- Sling Strap adjustment rail similar to the Model 40XB.
- 6. Hooded Front Sight.

gel<sup>23</sup>

7. Remington design Rear Sight with micrometer elevation and windage adjustments.

R & D expects to complete development so that the new targe rifle announcements can be available for 1968.

## MODEL 510-511-512 BOLT ACTION RIM FIRE RIPLES

A study to manufacture guns in Canada specifically as related to the use of Model 510, 511 and 512 equipment is to be made. Representatives from Canada visited Ilion November 4 to discuss the program.

## METAL FINISHES

Pilot production of Model 870 Receivers and Barrels with the improved metal finish has started. Samples of the finish being produced will be reviewed with Marketing. Full production including the Model 1100 is held until additional fixtures, which are due in January, are received.

The draft for Part II of the project will be held until a review of the expenditures on Part I is completed and a reestimate made of the costs for Part II. This should be accomplished in December. 83 83
