

PRODUCT RELIABILITY - contd.

SAAMI has a committee which at some future date will establish product reliability and safety guide lines for the industry. It is believed that Remington should not wait for this but make a study of the present position and consider if any action is necessary in design or product testing to further assure product reliability and safety.

As the first step, Production is to review the present testing, inspection and quality audit procedures at the December Operations Committee Meeting.

The meeting adjourned at 2:30 p.m. The next meeting is scheduled at Bridgeport Tuesday, December 10, 1968 at 8:30 a.m.
