

BENCH REST BULLETS - contd.

Marketing reported that these bullets have been received very well. The accuracy is being described as "phenomenal."

TRAPSELECTRIC TOURNAMENT TRAP

Marketing reported that Remington will need a line of traps if it is to go into this business. Included would be a tournament trap and autoloading traps for trap and skeet. The R & D developed traps fill all these categories and the Swedish (Hansen) traps are possible candidates for tournament and skeet.

Economics for the R & D autoloading traps for trap and skeet were presented - Exhibits 1, 2 and 3 (as revised.) Subsequent to the meeting, these economics were completed and revised to include the full percentage (9.4%) for Selling and Administration as shown in the Full Factory Costs. If Marketing field men are to be added for the trap business, the Cash Results will have to be revised also.

Both Marketing and R & D recommended that this autoloading trap for trap should be included as part of the Remington trap line with production starting as soon as possible. Economics will be revised to include all development costs on this trap. The skeet trap will be reconsidered after evaluation of the Swedish traps.

Committee Action:

The Operations Committee accepted the recommendation to add the R & D autoloading trap for trap shooting. General Management approval for release to production was recommended.
