

SHOTGUNS - contd.EXTENSION OF N/C CHECKERING TO  
ADDITIONAL CENTER FIRE RIFLES AND SHOTGUNS - contd.

Production reported that the second machine at Wilmington has traced grip patterns at 140 in./min. and Fore-ends at 120 in./min. The first grip was cut on this machine on January 17 at 60 in./min. Results are encouraging, however it probably will be three months before total capabilities are proven.

A project is not to be submitted based upon the economics shown here.

TRAPSNEW MECHANICAL TRAP  
(Introduction June, 1975)

Factory cost of this trap was presented - Exhibit 6.

Marketing will re-evaluate selling prices and volumes based upon this cost. When this is done, economics can be completed.

SKEET TRAP  
(Introduction June, 1975)

Factory cost estimates will be completed this week and given to Marketing for use in determining selling prices and volumes. Economics will then be completed.

FIELD COMPLAINT PROCESSING SYSTEM

L. L. Presnell reported status of the Field Complaint Processing System - Exhibit 7. Note that this exhibit is test deck data, not actual complaints. This report provides an analysis of justified customer complaints which will indicate where corrective action on quality problems is necessary.

The Chairman requested that the specific corrective action to be taken be noted on the report for those items which warrant attention.
