

SHOTGUNS - contd.MODEL 1100 TRAP VENT RIB BARREL - contd.

Production reported that the project for the new Vent Rib Barrel has been approved. Tool design will start the week of February 24.

MODEL 1100, 20 GAUGE LIGHTWEIGHT SHOTGUN  
(Introduction 1977)

Production reported that the project for this improved gun will be prepared in March.

PHOTO-ETCHED MATTING OF VENT RIBS

Production reported that results to date indicate the installed equipment cannot be operated to meet project capacity and costs. Evaluations are to be made on the cost effect of installing additional or revised equipment. Costs also will be determined for the installed equipment operating at its optimum capacity.

EXPENDABLE CASE SHOTSHELL PROGRAM

R & D reported the status of this program - Exhibit 1.

The R & D effort at Ilion has been to define major problems. No work has been done on feeding. The chamber sealing required prohibits use in a break-action gun - over and under or double barrel. A box magazine two-shot gun would be most practical.

Marketing expressed interest in this gun - ammunition package for target use.

CENTER FIRE RIFLESMODEL 700 BOLT ACTION CENTER FIRE RIFLE - IMPROVEMENTS  
(Introduction 1974)

Production reported that the Stock grip checkering pattern has been revised slightly such that it can be checkered on the three-spindle N/C machine. Line length corrections are being completed for this pattern.
