

Ilion's experience shows the M4100S superior to the Winchester trap in two respects, target breakage and consistency of flight. Breakage with Findlay targets is under 1%; with White Flyers virtually nil. Findlay breakage of the W-W machines is over 5%. Target flight from the W-W trap is such that about 1 out of 10 targets will miss a 30" ring over the aiming stake -- the 4100 will consistently throw within a 20" ring. Indications are that we have a superior trap for skeet.
