

SHOTGUNS - contd.MODEL 3200 PREMIER TRAP SHOTGUN
(Introduction 1974)

Production reported that it is expected these guns will be completed by November 1.

MODEL 3200 ONE OF 1000 SKEET SHOTGUN
(Introduction 1974)

Production reported that it is expected these guns will be completed by September 1.

MODEL 3200 FIELD MAGNUM SHOTGUN
(Introduction 1975)

R & D reported that design for the field magnum has been transmitted. The design alters the Barrels and Vent Rib --- the enlarged section at the muzzle has been run straight back, similar to the standard field Barrel; the only difference being the steel shot magnum has a thicker Barrel wall and the gun will weigh more. The height and thickness of the Vent Rib has also been increased to make the top Barrel more rigid.

Production reported that the revised design was received June 16. Trial and pilot operations on a lot of 150 complete Barrel Assemblies, will start July 7. Trial and pilot and product testing will be completed in September and product will be produced to warehouse starting December 1.

Marketing reported there are orders for about 1000 of these guns.

MODEL 3200 COMPETITION SKEET AND TRAP SHOTGUNS
(Introduction 1976)

Production reviewed the revised economics (Exhibits 2, 3, 4 and 5) for the project which is being rewritten.
