DEAR Sirs

The problem with this gun is two years ago I was sighting the scope in I pulled the trigger it would not fire the trigger was hard I took my finger off and then the gun went off second shot I bolted the shell and it went off just by bolting the shell sometimes it will go off and then some times the trigger is hard and will hesitate 5 or 6 seconds before firing something again this year its still messed up. I WAS hunting with this gun this year and squeezed the trigger and nothing happened I had enough time to look and see if the safety was on and then it went off I'm afraid of this gun you never know when its will or will not fire
