Dear Sir:

Enclosed find letter from Mr. Vango stating trouble with
 this gun.

He brought gun to me for inspection I did not remove
 action from stock. But checked it and I can't make gun
 fire when opening bolt. To me every thing seems to function
 as required, He questioned my knowledge of the gun's
 as I can't get no preset of trigger. This is the only thing
 I can't think of ^{nothing other} which would cause gun to fire when opening bolt.

If you can find cause would you please notify
 me for my records only - as I have repaired guns
 for about 40 yrs and sure can't see cause of this gun
 firing when opening bolt. without finger
 on trigger when releasing safety before opening bolt.

Thank you

P.S. I have customers that have
 of 600 Rem could you give me a
 General # of Guns that may cause
 trouble. Thank you

Charles E. Eby **OVER**
