Dear Sirs:

I have a 7mm. Mag. BDL Model 700 Bolt action rifle serial ⁸⁴6273921. I bought it at Smitties Sporting Goods in Dallas Tex.

I had an accident with it last November. The rifle discharged while I was attempting to unload it, I took it off safety and raised the bolt to unload it and it discharged shooting a hole in my pickup door ruining the stabilizer + elevator that raises the window also the bolt flew back gouging a chunk out of my thumb, I consider myself very lucky, I wasn't hurt more seriously and too no one else was close by. I still don't know what caused it to discharge. I've handled guns and hunted all my life and am careful with fire arms. The bolt has always been a little stiff working and one other time the rifle discharged when I threw it off safety. Freight is so expensive now don't want to ship the whole rifle in and
