Attention Fred MARTIN

I started to zero in a scope. When I put a shell in it my brother in law was handing it back to me the gun fired. I put another round in it started aiming at target the gun went off again. I cleaned the gun started to shoot it again.

Just as I was pushing the bolt forward I heard it click pulled the bolt back and the primer on that round was dented but it didn't go off. I hunt in the mountains of N.C. and I am afraid of this gun. Also I would like you to put a new sight on which I will pay for.

I thank You Very Much
