ARMS SERVICE

Gentlemen,

I am writing to you regarding my Remington model 700 - 30.06 - S/N A6406015. When releasing the safety to unload the gun - it fires. This has happened 3 times. Is there a problem of some sort with this model? I have spoken with another owner of the same type of gun. The same thing happened to him.

Please advise as soon as possible what should be done to remedy this extremely dangerous problem. I want to use this rifle during the fall hunting season in my area. I am anxiously awaiting your reply. Thank you.
