

Dear

Mr. Kast

I'm writing about my model 700
7m.m. mag. I sent it to you a few
months ago because it went off with
me while I was hunting shooting down
the stand row nearly killing a friend
of mine. I had shot a deer and killed
him when I loaded the rifle I had
it laying on my lap & it went off
well said the rifle was full of Rust
& I sent you a new trigger assembly
I polished the chamber & tested it then
said it was fixed. When I got it
back I tried it & it worked fine. I
put it in the gun cabinet & never shot
it. A few days ago I took it out &
was going to put my scope on

When I loaded it to see if it was loaded
& when I closed it it started & when you
put the scope on it got off & I
was in the woods & I was in the
put a bullet in it & I was in the
killed some deer & I was in the woods
this has happened many many times
I was in the woods
