Dear Sirs:

I have a Model 700 BDL 270 caliber rifle. I purchased it this year but have had some trouble. First the bolt wouldn't pull the shells so I had it worked on. Now I have a much larger problem. Twice now I have taken the safety off and the gun has fired. The first time I thought it was an accident on my part. Luckily the gun was pointed straight in the air. The second time it went off it shot a hole through my ear. This was some time later. I don't use it much since the last accident. It has only done this twice but I now know when it if it will do it again. Your time will be appreciated.

Sincerely, V. Varnum
