Dear Sirs,
I am having a problem with my
Remington 243. When I cock the gun
for firing, the firing pin out of the
back of the bolt does not stay engaged
in the cocked position causing the gun
to fire erratically. Also I had some
trouble with the safety. I could
not get it from the on position.
Would you check out the problem
and let me know what it is.

Model # 700 BDL
Serial # 6539387

Sincerely,
Richard J. Vearde
