Enclosed is a letter from the instructor of a course we just attended. After the cold shots the rounds were hitting 4-6 inches different on the paper. We never knew which direction it was going to be. It constantly changed each day during the course.

I have been told these weapons will be back to us in thirty days or less. We need them for a school in August. If they have to be specially shipped at extra cost to get them here by then please let me know.

If you have any questions please give me a call.

Thank you.

Shawn Harrigan
Detective, SGT
Fort McCoy Police

To: Harrigan, Shawn P Mr CIV USA IMCOM
Subject: Equipment

Shawn,

Feel free to forward this to whomever needs to see it. If you would like, I can put it on letterhead and send it as a hardcopy.

Derrick

Recently, your officers attended our Basic Police Sniper Course, in Avon Park, FL. Although all four gave their best efforts, only one, Brian Lord, was able to meet all of the requirements necessary to pass. The problem that overwhelmed them was their equipment.

Lord and Eggen had been issued M24 sniper rifles, topped with fixed ten-power Leupold Mark IV scopes. Both officers had issues with attaining working zeroes each morning, and having the rifle maintain that zero throughout the day. This was due mainly to the scopes. These particular models of scopes did not have regular elevation adjustment turrets. Instead, they were equipped with bullet drop compensators, tuned for a particular type of ammunition (which they weren't shooting). This made it impossible to dial in their weapons for the distances we were working at during the week. Not having a reliable zero forced them to guess constantly where the rifles were going to shoot, and then compensate.

It also appeared the actions were retrofitted to Remington PSS stocks, which haven't been fully free-floated. This caused changes in bullet strikes as the barrels heated during the day. An unacceptable variable for this line of work.

Henke and Harrigan arrived with M16 rifles, topped with Trijicon 5-power ACOG sights. These sights were rendered practically useless, first by being mounted on the carry handles, four inches above the line of bore. Additionally, the scopes were equipped with a post and chevron reticle, which may work for a combat rifle, but is inappropriate for sniper work.

Snipers have a difficult job, which requires equipment they can trust to work every time they call on it. Because they work in situations where shot placement is critical, a high degree of precision is absolutely necessary. Area shooting is not good enough. There is equipment designed specifically for their job, and agencies planning to stand up a sniper program must be willing to commit to acquiring it. Police snipers must have rifles which are capable of sub-MOA accuracy, all of the time. They must have variable power scopes with 1/4 minute adjustments for elevation and windage. The reticle must be a duplex or mildot crosshair design. Trying to make do with inferior, or unsuitable equipment is not acceptable.

If your long-term plan is to have a sniper program capable of performing within a civilian environment, you will need good personnel, proper equipment, and the right training. Without all three, your program is doomed to fail. We are willing to offer any and all assistance necessary to help you to accomplish this. Feel free to contact me.

Derrick

CENTROIDAL DISTANCE CALCULATIONS
FOR RIFLE # C6611657
17 May 1991

CENTROIDAL DISTANCES

0 TO	1	.0570701
1 TO	2	.235136
1 TO	3	.351511
1 TO	4	.209914
1 TO	5	.280863

 <----POA

THE AVERAGE X-COORDINATE FOR THIS RIFLE IS: -.0891
THE AVERAGE Y-COORDINATE FOR THIS RIFLE IS: -.0095
THE RESULTING AVERAGE POI RADIUS FOR THIS RIFLE
THE AMR FOR THIS RIFLE IS: 1.088
