R. B. SPERLING, ACTING SECRETARY

OTHERS:RECALL OF CERTAIN REMINGTON MODELS
600, 660 AND MONARCH 600 RIFLES
AND XP-100 PISTOLS

The status of the product recall and the results to date were reviewed. It was reported that 23,318 recall guns had been repaired since the introduction of the recall. Returns have been steadily declining. Through December 31, 1979, 25,000 telephone calls have been received at our Atlanta toll-free number. We are down now to about 7 calls a day. The Atlanta number will remain open until further evaluation.

In August of 1979, approximately 100,000 letters (see copy attached as Exhibit A) were sent out to Federal Firearms License holders requesting the names of customers who purchased recalled guns. Remington received the names of 1,922 customers, to whom we mailed copies of our recall letter.

Pending litigation involving claims against guns subject to recall was discussed. The current status of Remington's audit on the Model 700 was also presented, which showed that from June 13, 1978, to January 15, 1980, 3,376 Model 700's returned to Ilion for service were tested for the "trick" condition. Of this sample, 35 guns failed the "trick" test. But of these 35 guns, 22 guns were trickable because they had been altered or damaged out in the field. This means that the audit to date indicates that only about .4% of the audited Model 700's were susceptible to tricking due to causes not attributable to customer misuse. It is also known that only .4% of the guns manufactured before 1975 are so susceptible.

Since January of 1979, Ilion has added a new test to the Model 700 audit which involves turning the returned Model 700 on its back and inserting a screwdriver into the trigger assembly and attempting to trap the connector so that it cannot move freely back under the sear. In this condition, the gun will fire when the safety lever is moved to the "fire" position. This has been termed "firing off safe". Since the inception of the new test, 39 returned Model 700's were found to "fire off safe", but of this number, only 9 would do so because of causes not attributable to alteration or damage in the field--4 of which were guns manufactured before 1975.

Even if you combine the number of "trickable" guns with the number of guns that will "fire off safe", the figures indicate that approximately .6% of the Model 700's currently in the field will be susceptible to "tricking" or "firing off safe".

The status of the Model 600 recall and the Model 700 audit confirms the wisdom of Remington's previous determination, made in January of 1979 (See Product Safety Subcommittee Minutes dated January 2, 1979), that the Company's efforts to reduce accidents involving bolt action rifles would be best served by publicizing proper gun handling and maintenance information, rather than to continue running Recall notices producing ever-diminishing returns. Remington's ad "Half Safe is Unsafe" will run through April of 1980. The SAAMI sponsored firearms safety ads will be initiated in February 1980 and will be run with heavy intensity through 1981. (See Exhibit B for samples of the SAAMI advertising program.) It was reported that the SAAMI booklet "Firearms Safety Depends on You" (see Exhibit B) is being packed with every Remington firearm shipped from the factory. This program was initiated in January of 1980.

It was suggested that Remington consider putting an insert in its ammunition boxes which would contain the ten firearms safety headings found in the "Firearms Safety Depends on You" booklet. After discussion, it was decided to put the safety message on the panels at the back of the shotshell and center fire ammunition boxes where currently there is placed product information.

MODEL 788 BOLT ACTION RIFLE

Remington has received a letter from Hank Burchard, an outdoor writer from THE WASHINGTON POST, complaining about the position of the safety on the Model 788, in that it can be unknowingly moved to the "fire" position when the gun is carried over the shoulder.

(A copy of the letter is attached as Exhibit C). Preliminary examination shows that the Model 768, as well as several other models manufactured by competitors, are susceptible to having the safety moved from "safe" to "fire" by the fleshy part of the hand between thumb and forefinger when the gun is carried over the shoulder. Remington has had a few complaints about this situation in the past, but no reports of personal injury. The Subcommittee determined that the design of the Model 768 should be studied for corrective action, and that a letter of response should be prepared and sent to Mr. Burchard. (Subsequent to the meeting, a letter response was sent to Mr. Burchard--See copy attached as Exhibit D).

7mm EXPRESS CARTRIDGES

There have been reported incidents of gun damage due to consumers firing 7mm Express cartridges in firearms designed for magnum cartridges. The Marketing Manager (ammunition) and the Manager of Quality were directed to review the problem and recommend what could be placed on the 7mm Express containers that would emphasize the fact that the 7mm Express is not to be used in chambers designed for magnum loads.

30-06 HIGH PRESSURE LOADS

A recall notice was placed in vertical trade journals selected by Marketing as directed by the Product Safety Subcommittee in June, 1979. (See Exhibit E). Returns are no longer coming in pursuant to our notices. There still have been no complaints reported from

the field. Since it is believed that virtually all of this ammunition has now been used, no further action is planned.

R. S. Sperling

Acting Secretary

ATTORNEY'S FEES AND EXPENSES
FREIGHT FORWARDERS & CARS COMPANY, INC.

BILLER: PRODUCT RECEIPT

8. We are organizationally aware, we are managing a series of six Freight Forwarders offices throughout the country and we are the owners who operate these offices. We are looking to reach all of the offices who have purchased the requested Freight Forwarders offices and equipment, for information to insure that you look forward to your purchase directly, we ask that you look forward to your purchase through the customers to whom you may have sold the units being purchased.

For your convenience, we have printed the form below for sending us notice, indicating to customers who have purchased the requested Freight Forwarders offices, to cancel out the item, please read it. Please sign and date the form before the number.

Don't rely on your gun's safety treat
Every gun is like mine, loaded or not

Ready to fire

Today's gun is a much more advanced device than ever
before. It has a lot of safety features built in.
But it's still a gun. And it's still dangerous.
So don't rely on your gun's safety treat.

It's better to be safe than sorry. If you're not
sure about how to use your gun, ask a professional.
Or if you're not sure about how to handle your gun,
ask a professional. Or if you're not sure about how
to handle your gun, ask a professional.

If you're not sure about how to handle your gun,
ask a professional. Or if you're not sure about how
to handle your gun, ask a professional.
Or if you're not sure about how to handle your gun,
ask a professional. Or if you're not sure about how
to handle your gun, ask a professional.

Or if you're not sure about how to handle your gun,

Never Load or Carry a Loaded Gun Until You Are Ready To Use It

One of the cardinal rules of shooting safety is to load your gun only when ready to use it — and as soon as soon as you are through loading your handgun or rifle ... never carry a loaded gun in a holster or near you ... never load or handle a loaded gun or fingers off the trigger while loading or unloading.

For example, when loading and unloading, stand with the heel of an open palm held flat ahead of you before you leave.

Many old game hunters and oldtimers who have had their hands severely injured or maimed from gun accidents will tell you that this is especially true when hunting from tree stands.

Load your gun when loading your handgun or rifle in the shooting position or when carrying your gun in a holster. Don't load until ready to use it — and when safe, when hunting in the woods or in the mountains when you are. Don't load until ready to use it — and unless for some reason you are doing

Better Cross a Fence, Climb a Tree or Jump a Ditch Than a Loaded Gun

When you are hunting or trapping, always keep your gun unloaded. Before loading & when crossing a fence or climbing a tree or jumping a ditch, always unload your gun and then load it again when you are through. This is good advice for all kinds of outdoor activities. Before loading & when crossing a fence or climbing a tree or jumping a ditch, always unload your gun and then load it again when you are through. This is good advice for all kinds of outdoor activities.

By John G. Johnson

Q

5 Keep Guns and Ammunition Separately and in Locked Storage

This is probably the best way to store guns and ammunition. They should be stored in separate locations, separated from one another, with locks and keys under the care of a responsible adult. Gun owners need to consider the responsibility of storing firearms, but also the potential dangers of an inexperienced person accidentally setting off a gun or accidentally shooting themselves or others. It is important to keep guns and ammunition in a safe place, such as a gun safe or a locked storage unit, and to keep them away from children and unauthorized persons.

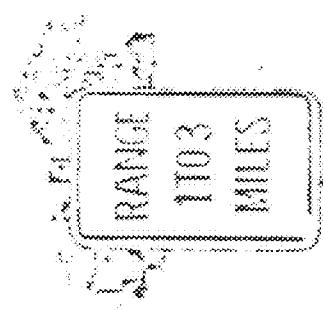

6 Set the Gun Firing Nozzle to Fire Only One Bullet at a Time

It is important to make sure that the muzzle of the gun is pointed in a safe direction when firing. It is also important to make sure that the gun is not pointed at anyone who may be in the vicinity. It is also important to make sure that the gun is not pointed at any other object, such as a wall or a door. It is also important to make sure that the gun is not pointed at any other person, such as a child or a pet. It is also important to make sure that the gun is not pointed at any other object, such as a wall or a door. It is also important to make sure that the gun is not pointed at any other person, such as a child or a pet.

With the 1990's approaching, we expect to see more

of the same trend as we have seen in the 1980's. This will likely mean more and more companies will

103

Simplifying business can help save costs and increase profits. Companies need to make sure their products are competitive and efficient. This means investing in new technologies and processes. It also means being open to change and adapting to new market trends.

Business leaders need to take a proactive approach to managing risk. This means understanding the risks involved in their business and taking steps to mitigate them. It also means having a clear plan for应对各种可能的情况。通过这样做，公司可以在面对挑战时保持竞争力，同时也能在关键时刻抓住机遇。

From the Range of Your Gun,

Airfield Outfitters

103

103 is used to denote a boundary or property line. It is also used to denote a specific location or area. In the context of property boundaries, 103 typically refers to a surveyor's term for a point or corner located at the intersection of two property lines.

In the context of locations, 103 may refer to a specific address or location, such as a house number or a street name. It could also refer to a specific point or corner located at the intersection of two property lines.

In the context of areas, 103 may refer to a specific region or area, such as a county or state. It could also refer to a specific point or corner located at the intersection of two property lines.

In the context of areas, 103 may refer to a specific region or area, such as a county or state. It could also refer to a specific point or corner located at the intersection of two property lines.

Always Wear Eye and Ear Protection

When crossing a street, always wear eye and ear protection. This includes wearing safety glasses and earplugs. These items will protect your eyes and ears from potential injuries. It is also important to wear safety glasses when shooting at targets or performing other activities that involve firearms. Safety glasses can help prevent eye injuries caused by flying debris or bullet fragments. Earplugs can help reduce the risk of hearing loss due to exposure to loud noises.

Always Be Sure the Barrel is Clean

It might be hard to believe, but a dirty barrel can be just as dangerous as a clean one. That's why it's important to make sure your gun is cleaned before you shoot. A gun that is dirty can block a bullet barrel, causing it to become stuck in the gun. This can lead to serious injuries if the bullet becomes lodged in your body.

Bullet — 35 in the case of most guns. It may be a good idea to have a gunsmith clean your gun for you. You can also do it yourself, but it's best to take it to a professional gunsmith.

Carry only the firearms you need. If you're not carrying a handgun, there's no reason to bring it along. If you're not carrying a shotgun, there's no reason to bring it along. If you're not carrying a rifle, there's no reason to bring it along.

Never shoot off your gun. Even if you're not carrying it, never shoot it. Never shoot off your gun. Even if you're not carrying it, never shoot it. Never shoot off your gun. Even if you're not carrying it, never shoot it.

It's a good idea to keep your gun clean and dry. It's also a good idea to keep your gun away from water. Water can damage your gun, and it can also damage your gun's trigger.

Always Carry Only the Proper Size Gun

For the same year, we offer three sizes:

1. A handgun of the proper size.
2. A handgun of the proper size.
3. A handgun of the proper size.

It's important to remember that a handgun is not a toy. It's a tool for self-defense. It's important to treat it with respect and care. It's also important to know how to use it safely. If you're not sure how to use it, ask a gunsmith or a gun store owner for advice.

Handgun — 35 in the case of most guns. It may be a good idea to have a gunsmith clean your gun for you. You can also do it yourself, but it's best to take it to a professional gunsmith.

**Always Carry Handguns With
The Hammer Down on an
Empty Chamber**

Handgun safety is largely a matter of common sense and the development of safe habits. For example

- *Carry loaded revolvers with empty chamber under the hammer.
- *Carry loaded pistol with the magazine inserted but with an empty chamber.
- *Always empty handguns before carrying into a house, car, boat or RV.
- *Never point a handgun at anything you don't intend to shoot.
- *Never handle a handgun without opening it yourself to check to see if it's loaded.
- *Always open your handgun and keep it open after loading.
- *Be sure of your backstop and what lies beyond it before you shoot.

Refer to the instruction manual you received with your gun.
