Present Trigger Assembly vs. Proposed New Trigger Assembly

A high spot economic evaluation has been completed using the 1981 N/700 forecast comparing the present N/700 trigger assembly to a proposed new designed trigger assembly. The safety is revised in the proposed new trigger assembly, cutting off the locking eye and adding a counterlock to activate the new safety plunger when the "safe" is on. New designed side plates, trigger and a new stop screw and spring completes the proposed new trigger assembly.

The attached economic sheet indicates a annual cost increase of \$35,270 in operating cost. A cost increase of \$16,800 and amortization of operation charges of \$16,000 will be realized with total capital required of \$20,060.
