SUBJECT OF EXPT.

New barrel breach ammunition

$$S = \frac{P(K_1^2 + K_2^2)}{(R_1^2 - R_2^2)}$$

Pitch Dia. of 1.067

274 mag.
PRESSURE = 84,000 psi

$$\begin{aligned} 1/8 \text{ } 1.067 & \quad R_1^2 = (.474 - .2)^2 = .237^2 = .056 \\ 1/16 \text{ } 1.018 & \quad R_2^2 = (.1067 - .2)^2 = .534^2 = .285 \\ & \quad R_2^2 = (.1018 - .2)^2 = .509^2 = .259 \end{aligned}$$

$$1/8 \text{ } S = \frac{84,000 (.3412)}{2788} = 125,000 \text{ psi } (270 \text{ Win})$$

$$1/16 \text{ } S = \frac{84,000 (.3152)}{2028} = 130,000 \text{ psi } (270 \text{ Win})$$

284 mag.
PRESSURE = 84,000 psi

$$\begin{aligned} 1/8 \text{ } 1.067 & \quad R_1^2 = (.514 - .2)^2 = .257^2 = .066 \\ 1/16 \text{ } 1.018 & \quad R_2^2 = (.1067 - .2)^2 = .534^2 = .285 \\ & \quad R_2^2 = (.1018 - .2)^2 = .509^2 = .259 \end{aligned}$$

$$1/8 \text{ } S = \frac{84,000 (.351)}{219} = 135,000 \text{ psi } (284 \text{ mag})$$

$$1/16 \text{ } S = \frac{84,000 (.325)}{193} = 141,000 \text{ psi } (284 \text{ mag})$$
