

2. Southpaws vs righthanders -

Of the total respondents, 9.92% are cut and out left-handers, 88.58% are right handed, and 1.50% shoot either left or right handed with equal ease.

3. Degree of interest in shooting -

Although interest in shooting extends through all classes of people, there is reason to conclude that participation in the sport is correlated with income. At least, an analysis of shooting interest by occupations of respondents ranks persons of higher income occupations above those whose vocations yield lower returns:

<u>Occupation</u>	<u>Percentage of respondents who are:</u>	
	<u>Gun "nuts" or regular shooters</u>	<u>Occasional or infrequent shooters</u>
Doctors and surgeons	89.5	10.5
Manufacturers	86.5	13.4
Contractors	85.0	15.0
Managers	84.7	15.3
Salesmen	83.7	16.3
Merchants	83.0	17.0
Machinists	81.6	18.4
Accountants and Bookkeepers	81.2	18.8
Foremen	80.7	19.3
Mechanics	80.0	20.0
Engineers	79.1	20.9
Retired	78.1	21.9
Laborers	76.5	23.4
Farmers	74.8	25.2
Clerks	74.1	25.9
Students (boys)	57.8	42.2

Interest in shooting, as measured by the percentage of "gun nuts" and regular shooters, seems to be greatest in cities of 500,000 to 1,000,000 population:

<u>City size</u>	<u>Percentage of respondents who are:</u>	
	<u>"Gun nuts" or regular shooters</u>	<u>Occasional or infrequent shooters</u>
Under 2500	71.8	28.2
2500 to 5000	83.9	16.1
5M to 10M	78.9	21.1
10M to 25M	79.4	20.6
25M to 50M	79.9	20.1
50M to 100M	85.7	14.3
100M to 250M	91.4	8.6
250M to 500M	80.0	20.0
500M to 1M	91.1	8.9
over 1,000,000	80.4	19.6
