TO: V. G. DeReus
 FROM: W. T. Lennox
 SUBJECT: M/721 RIFLE, REVISED ESTIMATE CFF-17

Revised estimate has been made of the M/721 Rifle, and shows a cost per each for direct material of \$6.01 (At quoted prices) and \$4.89 for direct material (At Remington's estimated factory cost for purchased components) and for direct labor \$3.21. The previous estimate furnished September 12, 1946, showed a cost of \$5.27 per each for direct material and \$3.07 for direct labor.

The difference between the material cost previously submitted and the revised material cost (shown at quoted prices) is largely due to the increase in steel prices for the Receiver; on the Bolt Handle the latest quote is \$.24 compared with the previous quote of \$.05; the Bolt Handle Ball is now quoted at \$.08 whereas previously quoted at \$.04; the Butt Plate is now costing \$.14 for aluminum construction whereas previous Butt Plate was priced at \$.09 on the use of steel; the Center Guard Screw and Ejector were previously estimated on the basis of Remington's manufacturing whereas now it is planned to purchase; the Trigger Guard is now quoted at \$.60 whereas previously priced at \$.27.

The increase in direct labor is largely due to the additional work required for machining the Bolt Handle; the Front Sight was formerly planned to purchase as precision casting complete, whereas it is now proposed to add, use M/141 Front Sight; the Sear has now been redesigned to consist of two parts, namely, the Sear and Safety Cam. The Safety Cam results in an increased labor cost of approximately \$.03, and we estimate approximately an additional cent for labor work required on the Sear. For further information on the differences between previous and present estimate, the writer has an itemized list showing the old and new costs together with an explanation as to what caused the change. This estimate has been approved by

the M/721 Gun Designer and Group Leader of Process Engineering. The Plant Methods and Standards Department has not confirmed estimate. The direct labor costs are based on full utilization of an operator's time; that is, on power fed machinery an operator will be required to operate a sufficient number of machines to eliminate idle time.

Attached hereto are sheets showing the material and labor costs per 100 pieces for each component. The material cost is shown based on the lowest quoted prices and also at Remington's factory cost for those items it is planned to purchase.

Remington's factory cost was arrived at by calculating the material cost required, plus our direct labor, plus 100% burden for a punch press item, 332% burden for a Brown & Sharpe screw machine item, and 500% burden for a multiple spindle screw machine item.
