SUBJECT:

ADVERTITIES - ARTICLE FOR "PRODUCT ENGISHERING"

Reference is made to our letter of September 14th in regard to the article for Product Engineering augustne on Design of the Model 722 Rifle.

Attached hereto are two copies of a draft which has been prepared in line with the suggestions in your letter of August 27th. This has been subjected to a brief review and editing by both H. A. Brown and the writer, however, in our opinion it can no doubt be improved by the type of treatment which can be given by H. P. Davis.

It is our opinion that in view of the nature of natural usually featured by Fromet Engineering assistant, some kind of a story will be described as to the processing problems involved in the namelacture of a product of this kind. If you agree that some reference to processing may be desirable, that portion may be picked up by Er. Davis, possibly through making a trip to the Plant, including informal discussions with H. J. Hackman and some of his process engineers. Also, should you recall may other features that we may have omitted, please advise.
