

TYPE: M. 725
 MODEL: 725

MODEL 725

PATENT SITUATION

Safety:

Basically, M. 725. Altered to gear thumbpiece and make bolt lock separate -- gives additional position which blocks star and allows bolt to open.

Floor Plate Latch:

Simple latch pivoting under lip in floorplate.

Floorplate: (Short action only) positioning of rear magazine spring hold-down lip so as to hold down long spring and to clear Cal. 1222 filler plate (when applied to Cal. 1222 rifle). Forming rear stop surface for that spring.

Sights:

Check stake in head in front.

Rear Sight:

Idea of attaching base with scope block screws at scope block spacing (between screws, and inter-block). Attachment of leaf by screw with ears to hold laterally. Eyepiece is as in old Krag rear sight, but attachment to leaf by windage screw threaded through ears in leaf. Have washer windage tension spring under collar over which end of windage screw is peened.

Sight Line:

Such as to put eye in natural alignment with iron sights, and within the area back of the scope eyepiece in which the eye can be positioned to give full field of view.
