H. J. HACKMAN

MODEL 700 - IMPROVED CENTER FIRE BOLT ACTION RIFLE SERIES

The above is another of the new items scheduled for 1962 announcement and which needs to be "buttoned up" as to indicated economics. M.H. Walker has advised that drawings of all new components except the stock have been completed for determination of costs.

Of course, it will also be necessary to include the proposed stock checkering operation on the new machine under development. However, suggest that you try to figure this one based on the designer's conception of the job so that we can get a reading on expected economics based on selling prices as Sales proposed.

you
he can contact Walker whenever you are ready to start this.
