

XC-13
XP700Remington Arms Company, Inc.
General InformationProject No. _____ - Gun WorksIntroduction

Under Part I of this project^{*} was authorized preliminary designs were developed for the new center fire rifle model XC-13 and the XP700 single shot pistol.

Indications are that most hunters in the east prefer lighter weight guns in the field for easier handling & less carrying fatigue. Interest also has increased greatly in the past few years in sidearms due to the development of new calibers such as the 357, 44 & 22 caliber magnums and other jet-type cartridges. Vermont hunters and target shooters have shown much enthusiasm due to light weight, range, trajectory, ease of handling & accuracy of this pistol.

Models of both types of guns have been made for evaluation using wood stocks, however further work will be necessary to develop molded stocks for both models and test for endurance.

The pistol & rifle will have the same bolts, receivers, sights, with nylon stocks & ribbed barrels. The pistol is a single shot model and the center fire rifle will have a fine shot option. It is planned to introduce calibers 222 Remington-Union in the pistol & 222 Remington & 308 calibers in the center fire rifle.
