INTER-DEPARTMENTAL CORRESPONDENCE

Dec 11 1962

To: F. E. Morgan

From: L. W. Johnson

Subject: Report of field firing test of XP100.

- 1- Operation of the gun was smooth. The safety was a bit too hard to operate
- 2- Trigger pull was excellent
- 3- Accuracy was excellent, Arrest required for long range.
- 4- It does not hold well in one hand, either right or left. Due to grip design it cannot be placed in the hand to line up with the forearm.
- 5- It does very well short range from a rest. It is my opinion that it could be superior if equipped with a scope.
- 6- Recoil is soft and quite light and there is a minimum of muzzle blast.
- 7- It is difficult to carry and does not lay flat and secure on flat surfaces.
- 8- It is a powerful long range short gun and could be classed possibly as a modified single shot carbine.
- 9- The fired cases can be easily hand loaded - no distortion from firing.

L. W. Johnson
