XP100 Test.

Dear Wayne:

Before making any suggestions on the XP100 I think it would be a wise thing to insert a piece of cardboard between the carrying case & shipping box. I'm opening my box & using a knife to cut the sealing strip I cut slightly into the case. There is no doubt that dealers will open the box the same way - a piece of cardboard between the carrying case & the shipping box will eliminate this.

We've had some terrible weather since receiving the arm and ammo.

I suggest that the wheatear be around the front of the box - the nylon

is slick & to me makes it hard to hold.
 I improved my grouse as soon as I
 mounted the grip with electrician's friction
 tape.

I don't go along with the way the sights
 are adjusted - Also I feel $\frac{1}{8}$ " would be better.

The arm belt muzzle light and hard to
 hold without a mottle - I taped a piece of expanded
 lead wire to the fore end of the stock - it helped
 me a great deal.

Ejection, extraction & feeding OK.

I might add that in taping the expanded lead
 wire to the fore end it was of greater length than
 combined bullet lengths would be.

Grip at base with contact of heel of hand seems too

long.

I would suggest the trigger balance be held in place
 by a screw - to keep it in line with the shot of the trigger lock.
 I further do not line up line of customer force - as
 it is now. This given the balance mechanism could be
 better.

Trigger pull excellent.

My folder on the XP-100 shows the
fold release in plain sight. which it is not.

Safety OK.

Regards,
Ray Oakland

P.S.
On the letter sent me. as soon as I
completed test I was to return arm to you.
It is going out by express to you to-morrow.

As a suggestion Wayne may not give us a Target
22 auto pistol - using H66.???
