

E. B. WALLIN

Sept. 2, 1964

S. M. ALVIS

We have been sending annual report data to G.M. Calhoun somewhat piecemeal. I have been giving him the complete reports as received from Walker, Leek and Bud Miller, after which we attempt to boil it down for his summary. Apparently you have been getting some of these, but just to make certain am sending along copies. If in excess, you can discard.

In conversation with Calhoun yesterday he talked to us of some of the descriptions as related to work being done with tapered bore barrels and the "erosive" bullets. He apparently questions our "ultra-high" projectile velocities. Appears Leek and his fellows do not agree, but nevertheless will still settle for revision and agree to "higher" velocities. This has been revised in the attached summary for Arms Design.

Have also revised that portion with regard to Dynapak and which was sent earlier to Calhoun. We have added mention of introduction of the "Custom Grade" M/700 as he suggested.

A few days ago I sent down a proposed paragraph for the summary as regards to the Govt. work on SPIW rifle. This was written in long hand; therefore, do not have copy. Believe he plans to use with the other Bridgeport Govt. work.
