R. A. GRAVELL

Accuracy of .222 Remington "Power-Lokt" Bullets  
 in Model 700 Rifles

"Power-Lokt" bullets are more accurate than conventional  
 SP bullets when fired in Model 700 rifles.

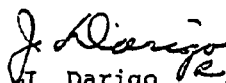

To fully evaluate the capabilities of the guns I fired  
 them:

- o as received, fitted with a 24X Unertl scope,
- o as received, fitted with 8X Bolvar scope,
- o by removing the existing stock and substituting a 40X stock:

The 100 yard accuracy results of five 5-shot groups are:

	Model 700 Rifle #100				Model 700 Rifle #495	
	24X Unertl Scope		8X Bolvar		24X Unertl Scope	
	As Rec'd	40X Stock	As Rec'd	40X Stock	As Rec'd	40X Stock
"Power-Lokt"	1.37	.953	1.4	1.24	1.23	1.23
Conventional SP	1.82	2.21	2.06	1.45	2.06	1.63
