Mr. Charles S. Aldrich  
R.D. #2  
Vincentown, New Jersey

Dear Mr. Aldrich:

Thank you for your letter concerning the Model 600 in 6.5mm Magnum cartridge. This model is now being produced to warehouse for shipment. Ammunition should be available next month. Muzzle velocity is as follows:

Yards					
100	200	300	400	500	
3030	2750	2480	2230	2179	fps

You will find this combination is excellent for all light skinned game up to and including moose, but I would say specifically excellent on deer, antelope and elk, and would be a fine sheep rifle. Our testing with this caliber and combination included the game just mentioned. Performance was more than satisfactory.

The magnum cartridge case is excellent for handloading. The warp-free stock maintains constant point of impact and the carbine is light enough and potent enough that I am sure you will find it excellent for all types of hunting. The price is \$144.95.

If you have any further questions concerning our products please do not hesitate to write.

Sincerely yours,

W. E. Leek,  
Manager - Firearms Research & Design  
Illion Research Division
