

Trigger Guard and Magazine Assembly - Cont'd.

Magazine Follower:	Stamped, magazine spring constraints and guides are spot welded to bottom, minimum follower contouring and high polish create impression of a machined part
Magazine Spring constraints:	Well constrained by follower on top and in pivoting floor plate at bottom
Floor Plate Latch:	Located in front bow of trigger guard, operates from outside of bow

Sights

Iron sights are available only as a factory option at extra cost.

The location of the bolt stop-ejector assembly precludes mounting any receiver sight on the rear bridge in the conventional manner
