NEW M/700 BDL RIFLES

The attached report indicates that the new M/700 BDL rifles are far below Remington Standards.

Test observations show problems with ejection, indent, extraction, and possibly with the anti-bind innovation.

Since all of these problems (except the anti-bind) are probably present in our current M/700 production, I suggest prompt action be taken to find, isolate, and correct them.

The anti-bind feature, should be reviewed by design.
