SUBJECT OF EXPT.

Scope Mounts

Sample #2 is in keeping with the request to be made cheap ^{per} I mean "cost efficient". It has been designed as a stamping to be attached to a dovetail as in Sample #1 but uses one screw to clamp and also hold the scope.

Lock Screw

This sample as sample #1 is of two different heights and would be stopped by the second bracket.

Parts are 1020 or 1095 Mat'l. spring tempered to insure a good grip. Large diameter that wraps around scope tube is slightly smaller than tube to insure interference and a good grip.

No starting done with this sample
