SUBJECT OF EXPT.

Integral Scope Mounts for M-7

This scope mount was intended and designed to be unique for Remington Bolt Action Rifle. By this I mean the mounting of a scope using these rings could only be done on a Remington Rifle.

There are normally three components necessary to mount a scope to a rifle: first the scope second the rings and thirdly the base.

By making the base as part of the receiver we can eliminate the base and use a ring of our design. This system that we have here in series of cuts on the top of the M-700 Receiver

Cuts in Top  
of Receiver

Slot to take  
Recoil

M-700 Receiver  
cross-section

The scope ring designed for use with this system has to clamp to engage the angular recesses in the receiver and a lug to engage the slot.
