Model XP-100 - Addition of a 7MM-08 Caliber

Estimated earnings and return on investment have been developed for the proposed addition of a 7MM-08 Caliber to the XP-100 Pistol.

In addition to the caliber change, sighting specifications have been revised for this model. The present open sights and vent rib will be replaced with peep sights (mounted on the front of barrel and rear of receiver).

Marketing has requested economics for this proposal be developed as follows:

- . The gun complete with sights.
- . The gun only, with sights to be offered as an option.

Marketing's inputs for this estimate included 1980 and 1982 retail prices, forecast sales, and a product line mix.

Please see the attached Subdivisions #3 and #5 for 1980 and 1982.
