M/700 BOLT POLISHING MACHINE (I #37497)

On 3/20/80, the special machine for polishing M/700 Bolts in Dept. 60 was run off at the Techni-Products, Inc. Plant in East Longmeadow, Massachusetts. It was found that a clutching mechanism should be added to the spindle drive to avoid turning the drive motor on and off each time a Bolt was picked up and polished. This should involve an additional charge of about \$750. Otherwise, the machine performed satisfactorily and there was a high degree of cooperation from the people at Techni-Products, Inc.
