Attention: Allan B. Hughes, P.E.

Dear Allan,

As per our conversation of 3/23/81, I am enclosing copies of our complete Industrial products catalogue along with pertinent information reference firearms care.

In addition to private labeling for Holland & Holland in London, CRC also sells CRC 3-36 to Ramset Fastening and distributors servicing Smith & Wesson and Winchester Corporation.

Ramset Fastening manufacturers powder actuated tools, and includes a 1 oz. can of CRC 3-36 to be used as both a cleaner and corrosion preventive.

Smith & Wesson currently uses CRC 3-36 as a final coating on their shotguns to prevent corrosion during storage and shipment.

Also, one of the largest firearms dealers in Connecticut recommends CRC 3-36 for use on Remington 870 rifles and model 1100 shotguns, both as a cleaner and corrosion preventative.

CRC 3-36 is well suited to the gun care field due to it's exceptional cleaning ability and it's unique thin film protection.

CRC 3-36's cleaning ability is enhanced by a unique blend of solvents which are very effective in removing lead and powder deposits. Although the test results from H.P. White (enclosed) are quite dated, the basic formulation of CRC 3-36 has not changed since 1964.

Page 2

The rapid fire test results (enclosed) show an actual increase in rate of fire when coated with 3-36, indicating a very thin film, stable film. This thickness varies between .05 and .07 mils.

CRC 3-36 meets the requirements of mil c 23411 - corrosion preventive and mil c-37 B cleaning compound, solvent (for bore of small arms and automatic weapons).

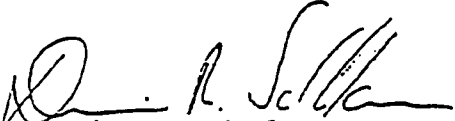

We at CRC Chemicals USA sincerely appreciate your interest in our products. Please contact me at your convenience should you require additional information or samples of any of our products.

As I mentioned on the phone, I will be in the Wilmington area the week of April 20th, however, anytime convenient to you would be acceptable for a possible visit.

Again, thank you for your interest in CRC Chemicals.

Sincerely,

CRC Chemicals USA
