

**GUN-CARE: CLEANS, LUBRICATES,  
REPELS MOISTURE, PREVENTS RUST**

**Directions:** Cleaning gun barrels: Saturate a cleaning patch with Gun-Care and push through until the barrels are completely clean. This will happen very quickly because new Gun-Care will penetrate between the metal and fouling or leading freeing it at once. Then spray Gun-Care directly into the bores and over the outside of the barrels. Salt corrosion should be washed away before treating as above.

Gun-Care provides unequalled protection for all firearms. Fully frees fouling makes cleaning easier and faster. Penetrates and literally drives out moisture from places only accessible to a gunmaker. Lubricates the entire action and cannot congeal. Protects all metal parts from rust and fingertip corrosion through periods of storage.

Also use Gun-Care to protect fishing tackle from rust.

**Caution:** Combustible. Keep from heat or flame. Container pressurized. Do not puncture or take in aircraft. Contents harmful if inhaled or swallowed. Product contains aromatic hydrocarbons. Keep out of reach of children.

CRC 3-36 IS EXCELLENT GUN CARE PROTECTION

No. 40

- \* CRC 3-36 is endorsed by Scandinavian Champion Marksman, P.A. JANHONEN.
- \* Holland & Holland, the world's most sophisticated shotgun manufacturer, recommends and sells CRC 3-36 as "HOLLAND & HOLLAND GUN CARE".
- \* A major firearms testing laboratory in Maryland found CRC 3-36 increased firing rate at minus 65°F. Competitive products subjected to the same test actually retarded firing rates. Low temperature slow performance of competitive products can cause gun jamming.
- \* The United States Government purchases CRC 3-36 from distributors for use by the armed services. Our Military Specification Number is Mil-C-23411A.
- \* Many manufacturers of powder actuated tools recommend and provide free samples of CRC 3-36 when they sell the tools.
- \* When subjected to accelerated corrosion testing, CRC 3-36 provided 16 times greater corrosion protection than the largest selling gun care product.
- \* Use CRC 3-36 to clean and penetrate outgassing jets on automatic and semi-automatic guns. Clean, lubricate and protect interior barrels with standard cleaning kits. Lubricate and protect trigger housings, weatherproof and fight corrosion on external gun surfaces with CRC 3-36, all purpose gun care.
