Messaggio /Message:

Dear Mr Trull,

Gaston Gravel sent me a copy of your questions about the breaking of 23 bolts and the jamming of 43 ejectors inside the bolt of the rifles 710.

Yes, the National Proof-House of Gardone Val Trompia rejected and kept 23 rifles and the reason is:

"They have the bolt buckled in the head". The technicians of the Proof-House informed us, orally, that under the strain of the firing test, the bolt head of some rifles had the rim of the ring, connected with the ejector, broken. In other words, the metal part of the ring of the head of the bolt which covers the housing of the bolt broke.

On the contrary, the Proof-House gave us back the 43 rifles with the ejector jammed inside of the bolt, but now we urgently need to receive, in an envelope, by mail, 50 ejectors with the spring (part. 7 of the exploded view of the spare parts) so that we can replace them with the ones jammed inside the bolt (which cannot be used anymore) in order to deliver the rifles to the dealers.

Some of these 43 rifles (5/6 pieces) have the bolt head slightly buckled (part. 4), however the Proof-House gave them back to us. We ask you to send us urgently (in the same envelope with the ejectors), also for these rifles, 5 or 6 bolt heads with 5 or 6 ejectors (part. 4 and 5 of the exploded view of the spare parts of mod. 710) so that we can repair these 43 rifles as soon as possible.
