TELEPHONE (315) 894-9961

To: Mr. Ron Stevens
H&P Die and Stamping Company
4650 Tiedeman Road
Cleveland, Ohio 44144

From: Dick Jackson
R&D
Remington Arms Co.

        Enclosed are two sets of the NBAR Magazine Box prints which we agreed that I'd send you. Please note the following on the Magazine Box (D-exp-1758A), the Floor Plate (C-exp-1901) and the Magazine Box Assembly (C-exp-1902) :

* The tabs at the bottom of the box are bent inside rather than outside as previously discussed. This will allow us to have only one mat'l. thickness protruding below the trigger guard.

* The width of these bottom tabs T.B.D. by you. Also, if you prefer several small tabs rather than one long tab, fine (so long as the Mag. Box Assembly specs. can be held).

* Position and size of gauging hole T.B.D. by you.

* The magazine's feed lips cannot be parallel to the sides of the box as I had hoped. They would not contain the cartridges.

* The Magazine Box print does not show the fasten-
  ing. This should be as we discussed on April 21
  (at the rear in a similar fashion as the model
  788 box with H&P to determine the positioning
  and size of the interlocking tabs and their

* Included is the fold-over latch at the front of
  the box. You may need to notch out some bend
  relief at the corners in order to fold this over.

    I expect to be away for considerable periods of
time during the summer. If you cannot get hold of me, please
feel free to contact Fred Martin with any of your suggestions
or difficulties concerning this magazine box. Fred is heading up
this project and can authorize any changes that may be needed.
You can reach Fred on extension 464.

                    Thanks and don't hesitate to call,

                    Dick Jackson.

                              Remington Arms Company. Inc.
