MONTHLY REPORT ITEMS-JANUARY 1990 FRED MARTIN

7mm Weatherby Magnum
The decision to offer this caliber in the M700 Classic was
made by the product team last December. Ammunition will also
be offered. Ilion has supplied Lonoke with two pressure and
velocity barrels we will also provide them a sample rifle to
complete their testing. Testing at Ilion may be slowed due
the lack of ammo production. It is planned to transmit the
drawing package by April 15. Final testing may have to be
done along with trial and pilot testing.

6mm BR Rem
The product team has made the decision to add this caliber to the M700 varmint line. Testing to determine the correct twist for the barrel have been done with no satisfactory results. It is appears that the twist and factory loaded ammo are not compatitable. As a result of the planned additional ammo offerings more testing is planned. Six prototypes are to be fabricated by the custom shop, and will be available for testing by the end of February. Feeding, accuracy, function and abuse testing are planned.
