M/700 Synthetic Stock (Smith)

DuPont is likely to drop production of Arylon, and a suitable substitute is needed for our synthetic M/700 stock.

Sample stocks made with a foamed mixture of reinforced Rynite and recycled P.E.T. plastic resulted in a stock weight four ounces heavier than Arylon.

Chris Tice of PPD will look for ways to modify the foaming action and the tooling to produce a stock equal to, or less than, the Arylon stock weight.
