Attached is a picture of a TIKKA bolt action rifle, which has styling that may be applicable to the 710. Specifically, please note the size and shape of the bolt plug and its relationship to the receiver. Please also note that the receiver has a chamfered edge on its rearward section.

It struck me that styling similar to this may be useful in creating a prototype for aesthetic purposes.

If the fax does not come out clear, a picture of the rifle can be found in the April edition of Guns magazine at the bottom of page 34.

FIRM OF THE NORTH

In fine Finnish tradition,
the Tikka All-Weather Hunter delivers
even in extreme weather.

By Clair Rees

Without exception, the Finnish-made Sako
sporter rifles I've used over the years have
been high-quality firearms that delivered
excellent accuracy. The only rub is price.

The angled receiver is drilled and tapped for standard
bases, and has integral rails to accept Tikka's new
Optilock scope mounts.
