TO: Ray Suarez
FROM: Mike Santillo
RE: M/710 Receiver Insert Mold Quotation
CC: J. Mead, J. Rabbia, M. Keeney, D. Diaz, J. Swanson

Please find attached 5 sets of drawings for the M/710 receiver insert for which we are requesting quotation. Due to the fluid nature of the design for this model, this quotation will be for a prototype tool that will eventually be used for production. Therefore, the tool is to be 2 cavity with one cavity to remain blank and be finished at a later date. Since this project requires aggressive scheduling to maintain tight timelines, any vendor submitting quotation for this tool must do so in a time period of 1 week to 10 days following receipt of the print package. Lead time for tool build is imperative. Our expectations are for delivery of prototype parts in less than 16 weeks.

Please contact me with any questions you may have regarding this @ X3466 or pager #246.
