**Cell:** D2  
**Comment:** Jim Ronkainen:  
For reference only.

**Cell:** G2  
**Comment:** Jim Ronkainen:  
Hole was drilled and tapped on production fixture. Dimensional results will be fed back to production. Use parts as-is and note any unusual behavior.

**Cell:** J2  
**Comment:** Jim Ronkainen:  
Vertical position of this hole is not critical to function. The slight increase in the trigger spring's moment arm with respect to the trigger pivot is insignificant and can be dialed out with the adjustment of the trigger pull force. Its is OK to use the parts as-is.

**Cell:** M2  
**Comment:** Jim Ronkainen:  
Hole was drilled and tapped on production fixture. Dimensional results will be fed back to production. Most variation is in the vertical direction, which is of no consequence. Use parts as-is and note any unusual behavior.

**Cell:** L8  
**Comment:** Jim Ronkainen:  
This part has the worst deviation of all the parts. The Solidworks layout shows that there is still more than 0.0135" clearance between the major diameter of the screw and the side plate under worst case conditions. All parts are OK to use as-is.

**Cell:** A18  
**Comment:** Jim Ronkainen:  
The trigger housing using rear spacer number 12 was lost in lilion during processing.
