Dear Dennis:

Thank you for contacting Remington Country! Thank you for your interest in the new Model 710. The bolt on the Model 710 is not like a conventional bolt action rifle. For the last 100 plus years, bolt action rifles have all basically been made the same way; the locking lugs on the bolt lock up into the receiver, while the barrel is screwed on. The Model 710 is a completely new way of thinking. The bolt locks directly into the barrel, and the barrel is hydraulically pressed into the receiver. Also, there are three locking lugs instead of two. This gives the rifle exceptional strength and accuracy.

Since the bolt locks into the barrel, the receiver now simply guides the bolt. The receiver of the Model 710 has a self lubricating synthetic insert to guide the bolt into the barrel. With this new insert, and the three locking lugs, there is a completely different feel. When pushing the bolt forward, there is a different feeling than on the Model 700 or Model Seven. This is because of the contact of the metal bolt and the synthetic insert and is normal. The "feel" is different, but the quality and performance of Remington is still there.

We offer a wide variety of calibers in the model 700. This is different for each model. The total of the calibers that we offer is as follows:

270 Win, 30-06, 22-250 Rem, 223 Rem, 243 Win, 308 Win, 7mm Rem Mag, 300 Win Mag, 300 Savage (only in the classic caliber for 2003), 25-06, 17 Rem, 7mm Rem Ultra Mag, 300 Rem Ultra Mag, 338 Rem Ultra Mag, 300 Rem Short Action Ultra Mag, 7mm Rem Short Action Ultra Mag, 375 Rem Ultra Mag, 7mm-08 Rem, 260 Rem, 280 Rem. The following are only in the custom shop: 300 Wby Mag, 338 Win Mag, 375 H&H Mag, 7mm STW, 416 Rem Mag, 458 Rem Mag, 35 Whelen, 8mm Rem Mag, and 35 Rem.

We hope that this information is helpful to you. If you have further questions feel free to contact us.

1. Is there a difference in the actions between a Model 700 and a Model 710? If so, what?
2. What calibers do you manufacture in the Model 700?
