

Remington Models Seven & 673

While the Model Seven is considered by many to be the ultimate dense-cover rifle, don't underestimate its range. The Model Seven still features the rigidity of Remington's Model 700 action and delivers exceptional accuracy for long-range shots. Remington has also introduced the Model Seven Magnum, which combines the performance of full-size, long-action magnum rifles with the legendary portability and quick handling of the Model Seven line.

The Remington Model 673 is based on the Model Seven action and builds on the legendary reputation of the Remington Model 600 Magnum, a rifle sought after by big-game guides across the country for decades. The swift-handling Model 673 features a 22" magnum contour barrel with a machined steel ventilated rib and iron sights. It is the definition of fast target acquisition. However, aside from being a performance oriented firearm, it is handsome as well. Each Model 673 is bedded in a two-tone, wide-spread

laminated Monte Carlo style stock with deep cut checkering and swivel studs.

Made in the USA

A 2" shorter overall length than the Model 700 makes the Model Seven perfectly sized for shooters of smaller stature.

Compact design for hunting in thick cover.

Utilizes the legendary "Three-rings-of-steel" from the Model 700 design.

Available in popular short action calibers as well as in Remington SAUM calibers for the ultimate in compact magnum performance.

The Model 673 is built on the Model Seven action, features a machined steel ventilated rib and iron sights for fast target acquisition.

Model 673 rifles feature a high strength wood laminate stock with stylish alternating light and dark stripes, reminiscent of the legendary Model 600 Magnum.

Remington Model 710

The Model 710 shares many of the same hallmark features as the Model 700. The same unequalled out-of-the-box accuracy. The same time-honored reliability. The same crisp, single-stage trigger design. The same ultra-fast lock time. And the same famous "three-rings-of-steel" for superior action strength. But, while much of the Model 710's base design is owed to its heritage, its real story starts with advancements made possible through today's most modern technology. Principle among its many remarkable features is a rugged barrel lock-up design. The rear of the Model 710 barrel is machined specifically to mate with three unique locking lugs on the bolt face. When the bolt is fully engaged in the forward position, it locks directly and securely inside the barrel — rather than the receiver — for unprecedented strength. Additionally, the fiberglass-reinforced nylon receiver insert is blended with Teflon and silicon before molding for continual self-lubrication and ultimately smooth operation. A short 60-degree bolt throw makes for convenient loading and unloading, as well as faster follow up shots. Beyond the superior mechanics, the Model 710 features a detachable dual-stack steel magazine. The button-ripped barrel is hydraulically pressed to the receiver and the stock is offered in a gray synthetic, uniquely textured finish with raised cheekpiece.

- Three locking lugs lock bolt directly into the barrel for unprecedented action strength
- 60-degree bolt throw for fast follow-up shots
- Six-groove button-ripped barrel
- Single stage trigger boasts famous Remington bolt action rifle 3-millisecond lock time
- 4-round detachable magazine box
- Rugged all-weather synthetic stock
- Equipped with mounted Bushnell Sharpshooter 3-9x40 scope, boretighted from the factory
