

- ADL is satin finish, lower grade wood, no black fore end tip. Blind box magazine.
- Both ADL & BDL come with swivel studs. These are both standard contour hunting barrels. Contour barrel is a heavy barrel (sometimes called a bull barrel). It has a bigger outside diameter.
- We have bull barrels are on the 700 varmint or Sendero.
- All of our varmint guns are short action caliber.
- Sendero's are mostly just long action versions of a heavy barrel.
- To site a firearm in we suggest that you shoot 3 shot groups, let cool for 15 to 20 minutes and shoot another group.
- Headspacing- alignment of the bolt, receiver, barrel, ammo. Necessary to keep from having too much room where excessive pressures can build up and cause damage. For excessive head space every bolt has different specs on the locking lugs.
- Barrel Assembly= barrel & receiver
- Barrelled action= bolt, barrel, receiver, trigger assembly (basically everything but the stock)
- Nylon 66- Lifetime guarantee on the stock. Customer has to send stock to the factory for exchange. If they send the entire gun, we will charge approximately \$35-\$50 to install the new stock.
- Receiver Plug Screws: Designed to plug up holes in barrel when you remove the front and rear sights.
- Varmint & Sendero: Swivel Studs are not sold through parts. They are only in the guns from the factory. Check with Ken or Tom Nagle for extra if needed. Recoil Pad is glue on. All other stocks, they are screwed on.
- Heavy Barrel: Better for accuracy, less movement, better heat dissipation for multiple shots.
- 710 parts: Used to come from OHL but switched to shipping out of Ilion as of August 2004.
- XP-100: Considered a handgun. Customer needs to over night or send though FFL.
- Crown: Muzzle end of barrel called the crown. On the end of the barrel is called the crown. Our guns have recessed crowns. This is so that when you bang the gun you don't knick the barrel. If you did knick the barrel you would destroy the accuracy.
- Free bore is there for safety reasons. Amount of space between the bullet and lands. Allows for variety of loads.
- The magnum has a recoil pad and 2 (as opposed to 1) black screw holes filled on the stock.
- A classic gun is a variation of a mountain rifle.
