

5TH COMMANDMENT

Use Proper Ammunition.

Every firearm is designed to use a certain caliber or gauge of ammunition. Using the wrong ammunition, including ammunition or using improperly reloaded ammunition can cause serious personal injury or death. And it only takes one cartridge or shotshell of the incorrect caliber or gauge, or which has been improperly loaded, to destroy your firearm. It's your responsibility to make sure the ammunition you use exactly matches the caliber or gauge of your gun. Refer to this instruction book to find out the specific requirements for your firearm. Always read and heed the instructions on ammunition boxes.

Confusing shells or cartridges can cause serious personal injury or death and destroy your firearm. Examine your shells or cartridges closely and use only the precise caliber or gauge for your specific firearm. For example, suppose you accidentally loaded a 20 ga. shell into a 12 ga. shotgun. In this case, the 20 ga. shell is too small for the chamber; the 20 ga. shell could travel down the barrel and get lodged into the bore. If you then loaded a standard 12 ga. shell behind it and fired, the 12 ga. shot will slam into the edges of the 20 ga. shell and may cause the barrel to explode right in your hand. This is commonly called a 12/20 burst, and it can kill you.

Check all ammunition before you load it to make sure it matches your gun's specifications. Every Remington® cartridge and shell is lead-wrapped with its caliber or gauge for easy identification. You'll find the caliber or gauge of your new Remington firearm imprinted on the barrel.

Reloading Requires Extra Diligence.

If you're an ammunition reloader, you are responsible for personally assuring that the loads and components of your reloads ammunition meet your gun's factory-loaded car cards. Never use gunpowder which has been re-caught by someone else!

Many shooters buy loads as a hobby or to save money on commercial factory-made ammunition. However, it requires a thorough knowledge of the loading procedures and a deep respect for the explosive potential of gunpowder.

Firearms are designed, manufactured and proof tested to standards based on factory loaded ammunition. Hand loaded or reload ammunition that deviates, either intentionally or accidentally, from load or component recommendations can be very dangerous.

Reloaders must observe all possible safety precautions and practices related to the proper handling of explosives. Whether you're a seasoned reloader or just starting out, you can study the subject, watch reloading demonstrations and talk to experienced reloaders.

The first rule of reloading is to always follow the manufacturer's instructions for the components you're using. They tell you to follow certain guidelines. Namely:

1. Don't mix or attempt to load different brands.
2. Don't use unknown or suspicious materials.
3. Use only suitable components that have been carefully checked by reputable ammunition manufacturers.
4. Always be sure to use the handloading equipment and recipe you've been given.

Not following these guidelines could result in severe injury to yourself or severe damage to your firearm. Dangerously high pressure and explosions can result from an overcharge of powder or other deviations from established reloading guidelines. Be very careful! The process of reloading exposes you to environmental hazards. Material lead, which is believed to cause cancer and birth defects, is the most common substance in bullets and shot. It is impossible to handle, eat, and clean shot with extreme care. Work only in a well-ventilated area and always wash your hands after reloading and before eating. Never smoke while reloading.

Primers and powders are also highly toxic and flammable. So after reloading be sure to clean up all materials from your work area. Don't leave primer or powder spills around the floor or bench top. Dispose of all waste material in accordance with the manufacturers recommendations.

Finally, when reloading or handling ammunition concentrate on what you're doing at all times. Do not be distracted by talking to others, listening to the radio or television, or while reloading. Never relax after consuming alcoholic beverages or drugs of any kind. You are working with extremely hazardous materials and you can't risk even a few seconds of distraction. Remember, if you reload, you are the ammunition manufacturer and you are responsible for the performance and safety of your reloaded ammunition.
